

OFFICE OF THE FACULTY COUNCIL

THE UNIVERSITY OF TEXAS AT AUSTIN

P. O. BOX 7816 • Austin, TX 78713-7816
(512) 471-5934 • Fax: (512) 471-5984 • <http://www.utexas.edu/faculty/council>

November 17, 2015

Judith H. Langlois
Interim Executive Vice President and Provost
The University of Texas at Austin
MAI 201
Campus Mail Code: G1000

Dear Dr. Langlois:

Enclosed for your consideration and action is a proposal to add an Computational Engineering Degree Program in the Cockrell School of Engineering chapter in the *Undergraduate Catalog, 2016-18* (D 13373-13380). On November 16, 2015, the Faculty Council unanimously approved the legislation. The proposal was classified as being of *general* application and of primary interest to more than one college or school. The authority to grant final approval resides with the Texas Higher Education Coordinating Board.

Please let me know if you have questions or if I can provide other information concerning these items of legislation.

Sincerely,

A handwritten signature in blue ink, appearing to read "Hillary Hart".

Hillary Hart, Secretary
General Faculty and Faculty Council

HH:dlr

Enclosure

xc: Gregory L. Fenves., president
Janet Dukerich, senior vice provost for faculty affairs

ec (letter only): Sharon L. Wood, dean, Cockrell School of Engineering
Gerald Speitel, associate dean for academic affairs, Cockrell School of Engineering
Carol Longoria, deputy to the president
Allen Walser, manager of reporting and analysis, IRRIS
Brenda Schumann, associate registrar
Lydia Cornell, Program Coordinator
Michelle George, administrative manager for faculty affairs, provost's office

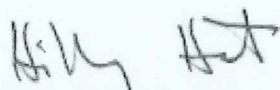

DOCUMENTS OF THE GENERAL FACULTY

PROPOSED ADDITION OF A COMPUTATIONAL ENGINEERING DEGREE PROGRAM IN THE COCKRELL SCHOOL OF ENGINEERING CHAPTER IN THE UNDERGRADUATE CATALOG 2016-2018

Dean Sharon L. Wood in the Cockrell School of Engineering has filed with the secretary of the Faculty Council the following addition to the *Undergraduate Catalog, 2016-2018*. On August 26, 2014, the Department of Aerospace Engineering and Engineering Mechanics approved the proposal. On April 27 and April 29, 2015, the faculty in the college and the dean approved the proposal, respectively. The secretary has classified this proposal as legislation of *general* interest to more than one college or school.

The Committee on Undergraduate Degree Program Review recommended approval of the new degree program on October 8, 2015, and forwarded the proposal to the Office of the General Faculty. The Faculty Council has the authority to approve this legislation on behalf of the General Faculty. The authority to grant final approval on this legislation resides with Texas Higher Education Coordinating Board.

The Faculty Council will discuss and take action on the proposal at its meeting on December 7, 2015.

Hillary Hart, Secretary
General Faculty and Faculty Council

Posted on the Faculty Council website <<http://www.utexas.edu/faculty/council/>> on October 19, 2015. On October 29, 2015, the Cockrell School of Engineering requested the presentation of the proposal be postponed until December 7, 2015.

**PROPOSED ADDITION OF A COMPUTATIONAL ENGINEERING DEGREE PROGRAM IN THE
COCKRELL SCHOOL OF ENGINEERING CHAPTER IN THE UNDERGRADUATE CATALOG 2016-
2018**

Type of Change Academic Change
 Degree Program Change (THECB form required)

Proposed classification Exclusive General Major

1. IF THE ANSWER TO ANY OF THE FOLLOWING QUESTIONS IS YES, THE COLLEGE MUST CONSULT LINDA DICKENS, DIRECTOR OF ACCREDITATION AND ASSESSMENT, TO DETERMINE IF SACS-COC APPROVAL IS REQUIRED.

- Is this a new degree program? Yes No
- Does the program offer courses that will be taught off campus? Yes No
- Will courses in this program be delivered electronically? Yes No

2. EXPLAIN CHANGE TO DEGREE PROGRAM AND GIVE A DETAILED RATIONALE FOR EACH INDIVIDUAL CHANGE:

We are proposing a new degree program, the Bachelor of Science in Computational Engineering, to be administered within the Department of Aerospace Engineering and Engineering Mechanics. Engineering applications are becoming increasingly complex and interdisciplinary, and solutions often rely on the efficient use of computer software and hardware. There is a need for a degree program which combines fundamental engineering principles with more advanced knowledge of mathematics, computational methods and programming techniques, beyond what is currently offered in most engineering disciplines. The computational engineering program is designed in response to this need.

3. THIS PROPOSAL INVOLVES (Please check all that apply)

- | | | |
|--|--|--|
| <input checked="" type="checkbox"/> Courses in other colleges | <input type="checkbox"/> Courses in proposer's college that are frequently taken by students in other colleges | <input checked="" type="checkbox"/> Flags |
| <input checked="" type="checkbox"/> Courses in the core curriculum | <input type="checkbox"/> Change in course sequencing for an existing program | <input checked="" type="checkbox"/> Courses that have to be added to the inventory |
| <input type="checkbox"/> Change in admission requirements (external or internal) | <input type="checkbox"/> Requirements not explicit in the catalog language (e.g., lists of acceptable courses maintained by department office) | |

4. SCOPE OF PROPOSED CHANGE

- a. Does this proposal impact other colleges/schools? Yes No
 If yes, then how? There will be a slight impact on the College of Natural Sciences with the demand for seats in Statistics and Data Sciences classes (SDS 322 and 329C) and Mathematics (M 362K), however this number may be in line with the numbers of students already pursuing the CSE Certificate.
- b. Do you anticipate a net change in the number of students in your college? Yes No
 If yes, how many more (or fewer) students do you expect?
- c. Do you anticipate a net increase (or decrease) in the number of students from outside of your college taking classes in your college? Yes No
 If yes, please indicate the number of students and/or class seats involved.
- d. Do you anticipate a net increase (or decrease) in the number of students from your college taking courses in other colleges? Yes No
 If yes, please indicate the number of students and/or class seats involved.
 How many students do you expect to be impacted?

If 4 a, b, c, or d was answered with yes, please answer the following questions. If the proposal has potential budgetary impacts for another college/school, such as requiring new sections or a non-negligible increase in the number of seats offered, at least one contact must be at the college-level.

In answer to both 4a and 4d:

How many students do you expect to be impacted? We expect thirty students per academic year to be added to SDS and Mathematics classes, specifically SDS 322, SDS 329C and M 362K.

Impacted schools must be contacted and their response(s) included:

For SDS:

Person communicated with: Dr. Dan Stanzione and Dr. Mike Daniels

Date of communication: February 9, February 10, 2015; responses received Feb. 10, July 16, July 10

Response: "I'm happy to go ahead and commit Intro to Scientific Computing; we provide pretty much all the resources for that course anyway." "SDS 329 and 322 should be fine to include for now." "It is OK to list these as electives." (see attached)

For Math:

Person communicated with: Dr. Alan W, Reid, chair, Department of Mathematics

Date of communication: February 9 and 11, 2015, response received February 20, 2015

Response: "You have Math's approval on this with two caveats. The new version of 427K that was worked out with Engineering is 427J so you should replace 427K by 427J. Also it should be M340L and not M341 since the students are not math majors." (see attached)

Other CNS courses should not be affected since there is no net growth in the number of engineering students taking these courses.

Approved electives are pre-approved electives that are SDS classes. They are already pre-approved for ASE majors. Page 9 of the attached emails PDF shows that approval was received to list those courses for the Computational Engineering degree program.

- e. Does this proposal involve changes to the core curriculum or other basic education requirements (42-hour core, signature courses, flags)? If yes, explain:
No, there are no changes to the core curriculum or other basic education requirements.
- f. Will this proposal change the number of hours required for degree completion? If yes, explain:
The total number of hours required for the Bachelor of Science in Computational Engineering will be 122. This is different from the 126 hours required for the current major in our department, the Bachelor of Science in Aerospace Engineering.

5. COLLEGE/SCHOOL APPROVAL PROCESS

Department approval date: August 26, 2014

College approval date: March 27, 2015

Dean approval date: April 29, 2015

BACHELOR OF SCIENCE IN COMPUTATIONAL ENGINEERING

Computational engineering is a relatively new field in engineering that recognizes the increasing demand for advanced computational methods in engineering practice. Computational engineering in this context refers to the study and development of computer algorithms that translate mathematical and physical descriptions of engineering problems into languages that computers can process. This emphasis distinguishes computational engineering from computer science and computer engineering. Computational engineers must have basic knowledge of fundamental engineering and science, with more advanced knowledge of mathematics, algorithms and computer languages. Because of their extensive education in these disciplines, computational engineers can work in a variety of areas.

The objectives of the computational engineering degree program are to prepare students for professional practice in engineering; to prepare students for such post-baccalaureate study as their aptitudes and professional goals may dictate; to instill in students a commitment to lifelong education and to ethical behavior throughout their professional careers; and to make students aware of the global and societal effects of technology. To meet these objectives, the faculty has designed a rigorous curriculum that emphasizes fundamentals in the basic sciences and the humanities, integrates classroom and laboratory experiences in engineering, with advanced instruction in mathematics, statistics and computational science. The curriculum requires students to use modern engineering tools and computer technology, to work individually, and to practice teamwork.

The first two years of the computational engineering curriculum emphasize fundamental material along with engineering sciences, while the third and fourth years provides further depth in mathematics, algorithms, computer languages, and experimentation. The major offers technical electives in the third and fourth years where students may choose an industrial track or a post-baccalaureate track. The industrial track focuses on the applications of computer methods in industry, while the post-baccalaureate track prepares students for graduate study and research.

Program Outcomes

Computational engineering graduates should demonstrate:

- An ability to apply knowledge of mathematics, science, and engineering
- An ability to design and conduct experiments, as well as analyze and interpret data
- An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- An ability to function on multidisciplinary teams
- An ability to identify, formulate, and solve engineering problems
- An understanding of professional and ethical responsibility
- An ability to communicate effectively
- The broad education necessary to understand what impact engineering solutions have in global, economic, environmental, and societal contexts
- A recognition of the need for and an ability to engage in lifelong learning
- A knowledge of contemporary issues
- An ability to use techniques, skills, and modern engineering tools necessary for engineering practice

Program Educational Objectives

Within a few years of graduation, computational engineering graduates should:

- Contribute to the economic development of Texas and beyond through the ethical practice of computational engineering in industry and public service
- Exhibit leadership in technical or business activity through engineering ability, communication skills, and knowledge of contemporary and global issues
- Continue to educate themselves through professional study and personal research
- Be prepared for admission to, and to excel in, the best graduate programs in the world
- Design systems to collect, encode, store, transmit, and process energy and information, and to evaluate system performance, either individually or in teams

- Use their engineering ability and creative potential to create technology that will improve the quality of life in society

Portable Computing Devices

Students entering computational engineering are required to have access to a portable computing device capable of running the software tools required for undergraduate engineering analyses (MatLab, Word, Excel, etc). This device does not need to be brought to campus on a daily basis, but individual courses may require that the device be brought to certain lectures, labs, and/or exams. Once admitted, students will be informed by the Aerospace Engineering and Engineering Mechanics Department office about specific device requirements.

Curriculum

Course requirements are divided into three categories: basic sequence courses, major sequence courses, and other required courses. In addition, each student must complete the University's Core Curriculum. In some cases, a course that fulfills one of the following requirements may also be counted toward core curriculum or flag requirements; these courses are identified below. To ensure that courses used to fulfill the social and behavioral sciences and visual and performing arts requirements of the core curriculum also meet ABET criteria, students should follow the guidance given in ABET Criteria.

In the process of fulfilling engineering degree requirements, students must also complete coursework to satisfy the following flag requirements: one independent inquiry flag, one quantitative reasoning flag, one ethics and leadership flag, one global cultures flag, one cultural diversity in the United States flag, and two writing flags. The independent inquiry flag, the quantitative reasoning flag, the ethics and leadership flag, and both writing flags are carried by courses specifically required for the degree; these courses are identified below. Courses that may be used to fulfill flag requirements are identified in the *Course Schedule*.

Courses used to fulfill technical elective requirements must be approved by the computational engineering faculty before the student enrolls in them.

The student must take all courses required for the degree on the letter-grade basis and must earn a grade of at least C- in each course, except for those listed as Remaining Core Curriculum Courses. He or she must also maintain grade point averages of at least 2.00 in the major area of study and in required technical courses as described in Academic Standards, and a cumulative University grade point average of at least 2.00 as described in *General Information*.
