

Final Cut Pro – Creating a Title Clip

- To create a title clip:
- Select a text generator by doing one of the following:
- Click the Video or Audio tab in the Viewer,
- choose a text generator from the Generator pop-up menu.

- In the Viewer, click the Controls tab.

Final Cut Pro – Creating a Title Clip

- *Text*: Enter your title text in this field.
- *Font*: Choose a font from the Font pop-up menu.
- *Size*: Change the font size by entering a value or dragging the slider to the left or right.
- *Alignment*: Choose the alignment of your title on the screen from this pop-up menu.
- Your choices are Left, Center, and Right.
- *Font Color*: Choose the color of your font by doing one of the following:
- *Disclosure triangle*: Click to display sliders and number fields corresponding to the hue, saturation, and brightness of the range of colors available.
- *Eyedropper tool*: Click the eyedropper, then click an image in the Viewer or the Canvas to pick up that color.
- *Color picker*: Click to choose a color using the standard color picker.
- *Hue, saturation, and brightness controls (H, S, and B)*: Hue determines which color is chosen; saturation determines how vivid the color is. If saturation is 0, the resulting color is always white. Brightness determines how bright or dark the color is. If brightness is 0, the resulting color is black; if brightness is 100, the color is the lightest possible value.
- *Origin*: Origin refers to the center of the text. The Origin setting determines where the text appears within the screen. You can position the text by clicking the point control (a round button with crosshair) and then clicking a point in the Canvas or Viewer (the pointer becomes a crosshair pointer). Or, you can enter x and y coordinates in the Origin number fields.
It's often easiest to make large adjustments manually with the point control and then fine-tune the position by making numerical changes to the number fields. The most visual way to position the text is to tear off the Viewer tab, click the point control, and then drag the text to position it in the Viewer.
- *Note*: Once you release the mouse button, you have to click the point control again if you want to make further manual adjustments.
