\*Initially all masters level students are accepted into a "without thesis" Master of Education (MEd) degree program. For students who seek the Master of Science degree with thesis or report, it is the responsibility of the student to become involved in research and select an appropriate thesis/report advisor. Selection of the advisor is by mutual consent between the student who selects an advisor and the advisor who agrees to supervise the student. Usually this selection occurs during the first long semester of graduate course work.

\*\*Doctoral students are admitted to the program only with the mutual consent between the doctoral applicant and the advisor who agrees to accept and supervise the applicant.
