How to Importing MXF files (originated from Panasonic HVX200/P2) into Avid

1. Copy P2 media on to the Storage Drive in a folder called Avid MediaFiles>MXF>1
   Go to Drive and look for a folder called AVID MediaFiles inside that a folder called MXF and then inside that a folder called 1. Put all MXF files in the folder called 1.

   The MXF files to import are only the ones located in the VIDEO and AUDIO folders (under CONTENTS)

2. Launch AVID and create a project that matches the MXF media frame rate and aspect ratio. Usually 720p/23.976 or 1080p/23.976 or 1080i/59.94.
   Name project and click OK

   ![Format Selection](image)

3. Once AVID launches project go to >Tools > Media Tool
   Select the all the Media Drives and All Projects.
   Make sure that only Master Clips is selected and Click OK
4. When the Media Tool shows all the clips select the ones that you created and drag the clips to a newly created bin in the AVID project.

5. EDIT your project
