

Esri Education Institution License Program Overview – U.S.

The Education Institution License Program provides qualified institutions with an affordable way to acquire the ArcGIS platform for non-commercial teaching, research, service, and campus administration. Qualified institutions include accredited, degree-granting 2-year and 4-year colleges and universities worldwide, and administrative offices of primary and secondary schools and school districts.

The Education Institution License Program includes two sets of licenses for the Esri products listed below. One set is for academic use (teaching, research, service) and another is for administrative use.

License Benefits

Esri software products provided with this license are listed below.

Also included are technical support, software updates, access to self-paced e-learning resources, and complimentary registration for the Esri User Conference and Education Summit.

Quantities and levels of product licenses, user accounts, service credits, and other license characteristics vary according to your institution's size and needs. However, our objective is to maximize access and flexibility of use throughout your organization at an affordable cost.

For details and pricing about this and other Esri Education licenses, please contact educationinfo@esri.com.
