Super Bin was discontinued in AVID Media Composer version 6.

This workflow is just as functional and even better.

Using Tabs in the bin will help organize open bins so there is more working space on the desktop.

To set up open a bin or create a bin to use as the main bin and drag over the bins that are open to create tabs within the bin.

This image shows the Tabbed Bins.

You can also click on the upside down triangle shown here to navigate which bin is selected.

This is similar to how Super Bin worked.
