# launcher_creator.py

Usage:

To get the help message, type:

```
launcher_creator.py -h
```

| Argument | Example | Default | Description |
|----------|---------|---------|-------------|
| **-e** | -e me@mail.com | Nothing | Optional. If you specify an email address, Lonestar will send you an email when your job starts and finishes. |
| **-q** | -q normal | development | There are several queues: development is for jobs less than 1 hour, normal is for jobs less than 24 hours. |
| **-t** | -t 3:40:00 | Nothing | Required argument. This specifies how much time you want to give your job. The less time, the sooner TACC will start it. |
| **-a** | -a my_allocation | The allocation of this class. | An allocation of a number of hours is given to your project. Specify that allocation's name with -a. |
| **-n** | -n Trinity | Nothing | Required argument. This is the name that your job will have when you type "qstat." |
| **-j** | -j ./trinity_commands | ./commands | This is the name of the file that you created with your commands. It might be filled with a bunch of calls to a project like Trinity. |
| **-l** | -l trinity_launcher.sge | launcher.sge | This is the name of the launcher file that will be created. Type "qsub launcher.sge" to send it to the queue. |
