Scheduled Server Maintenance

Scheduled Maintenance

In order to better manage non-security related software updates that may require a reboot, we have reserved the time period between 5:00 - 8:00 am Monday mornings for machine reboots.

During the maintenance window:

- All servers will be rebooted, if required, each week.

Security related updates that require a reboot will continue to be performed as needed, and any necessary actions, like rebooting a machine, will be done immediately. No advance notice can be given for important security updates.

Maintenance Window - Mondays from 5am to 8am
