Looking up status of sequencing job

The Detailed job information report link allows users to view a report generated for their job. This can be used only after a sequencing request has been accepted by the GSAF as a sequencing job and the user has been provided a Job Number.

Here's how it works:
1. Enter the Job Number (including 'JA') and press 'Submit'
2. A report with information pertaining to the job will be displayed. This will include basic information about the job and all of the samples. It will also include information about any and all QC runs completed on the samples, EMPCR and sequencing run information.

To run this report, click here.
