To patch around the Crestron audio system if there is a failure:

Patch L and R Out of the top row and into a Mackie or similar

Then patch out of the Mackie or similar and patch into 1 and 2 in 4 rows down from the top.

This is in Studio 4A closet.
Patch L and R
Out of the top row and into a Mackie or similar

Then patch out of the Mackie or similar and patch into
1 and 2 in 4 rows down from the top

Patch out of the Decoder into the Mackie and out of the Mackie into the AAmp 1 Input
We do have a SDI generator. To plug into the system for testing. Just to note here has nothing to do with patching around the DSP.
