1. Go to **Mail, Contacts, Calendars** control panel, then select your Exchange account under **Accounts**.

   - Click on the **Mail** account, then select **Account**.

   - Click on the **UT Email** account and select **Account**.

   - Click on **Advanced Settings**.

2. Click on the **Account** setting at the top and select **Advanced Settings**.
3. Go to the S/MIME settings and turn on S/MIME.

   ![Screenshot of Account Advanced Settings]

   - **Use SSL**: Off
   - **S/MIME**: Off
   - **Sign**: No
   - **Encrypt by Default**: No

   **NOTE**: This will digitally sign all outbound email from this account. Messages cannot be signed on a per-message basis.

4. Select the **Sign** setting and make sure the Sign option is On. Your certificate will already be listed with a check mark next to it. If you have multiple certificates installed, select the appropriate one.

   ![Screenshot of Sign Settings]

   - **Sign**: On

   **NOTE**: This will digitally sign all outbound email from this account. Messages cannot be signed on a per-message basis.
5. **(OPTIONAL)** Select the *Encrypt* setting.
6. Make sure that the *Encrypt* option is set to *On*. You certificate should already be listed with a check mark next to it. If you have multiple certificates installed, select the appropriate one. Go back to the *Account* setting and select *Done*.
