ProTools - What the other buttons do in the volume control in 5 CMB 1.122

Ever wonder what the other buttons do on this thing?
surround channels will produce 80 dB SPL, while the LF channel will produce around 96 dB SPL. Most of the channels follow...
with the SMPTEX - Curve frequency responses (see the screen grab to the right). This room follows the SMPTE RP 200 and 202.
