Logic Pro - Logic Audio Monitoring

Logic Pro 7 audio fix.
To hear audio out of the computer speaker:
Launch Logic and use the default user setups.
Go to >Logic Pro > Preferences > Audio

The audio prefs. open. Click on the Drivers tab. Then check the Enabled box on Core Audio.

The app. will prompt to ReLaunch Logic Pro. Click the “Try (RE)Launch

Click OK on this prompt.

Logic will scan all the connected audio interfaces and will find no others available except for the built in audio inputs. This is what we want to use so click OK. Now audio will be sent to the local speakers on the computer.
