

DVD Studio Pro - Make a 4x3 SD DVD

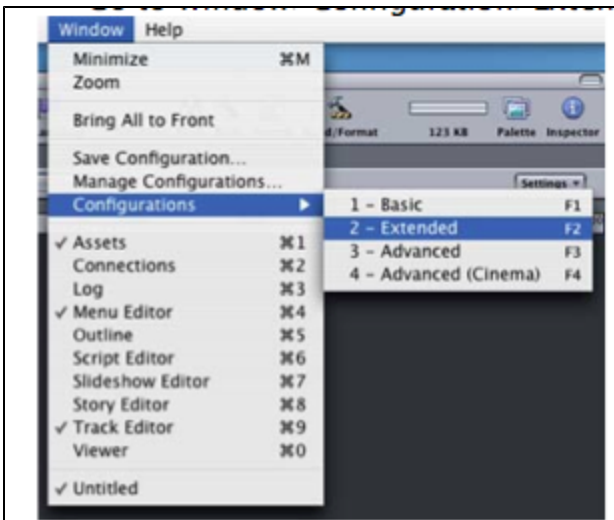

How to make a 4x3 SD DVD

Written by Susanne Kraft, susanne.kraft@austin.utexas.edu

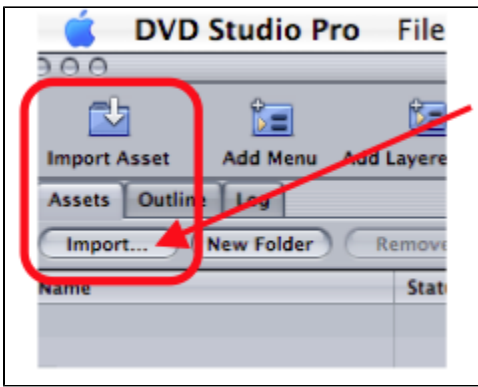

- In Final Cut Pro export a quicktime reference movie

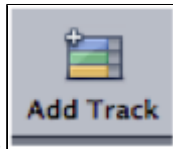

- Save to a local storage drive or personal drive. Don't save to the Macintosh HD or Desktop
- Launch DVD studio Pro and make a new project • Go to Window>Configuration>Extended to change DVD Studio interface

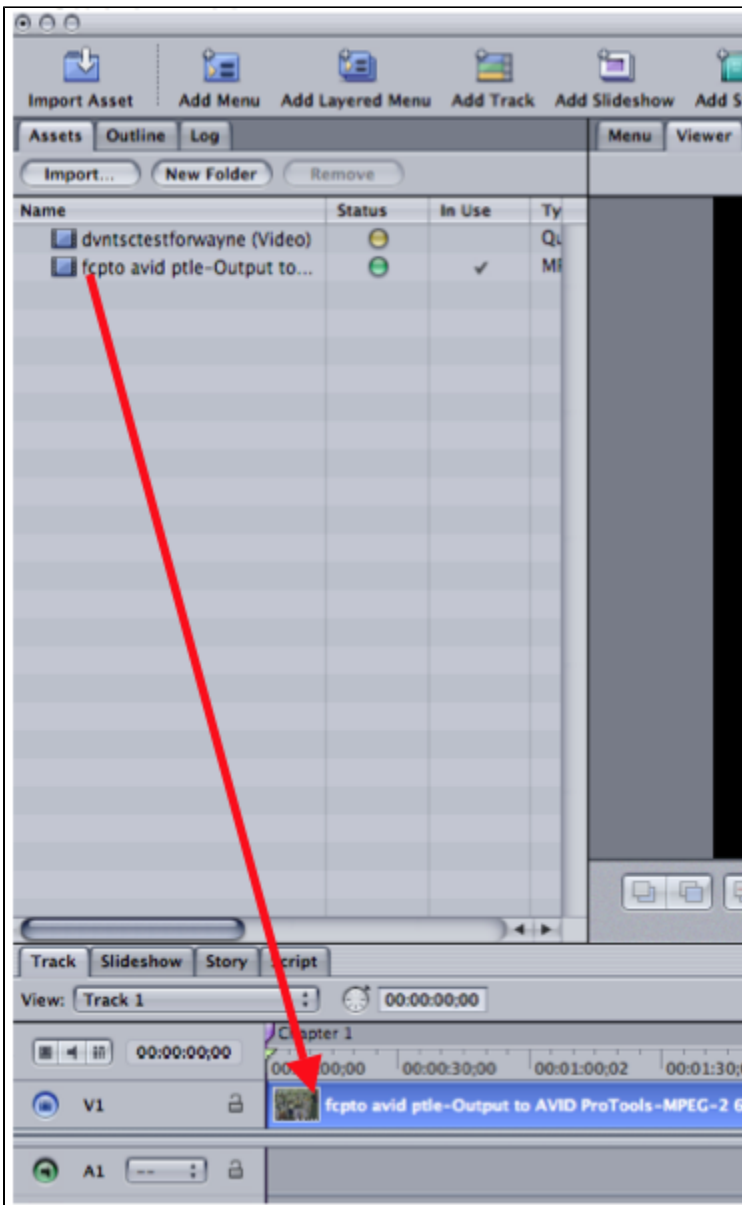

- Import the Quicktime reference file or Quicktime movie into the Assets window

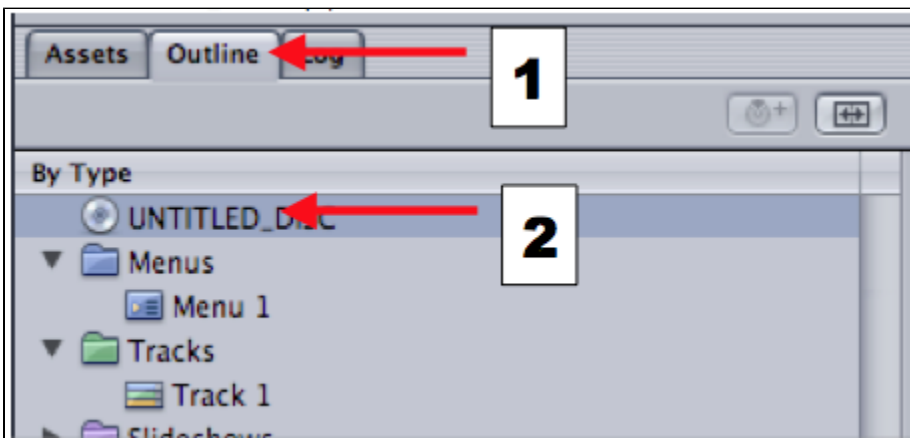

- Drag the quicktime from the ASSETS tab to the Track timeline. If you

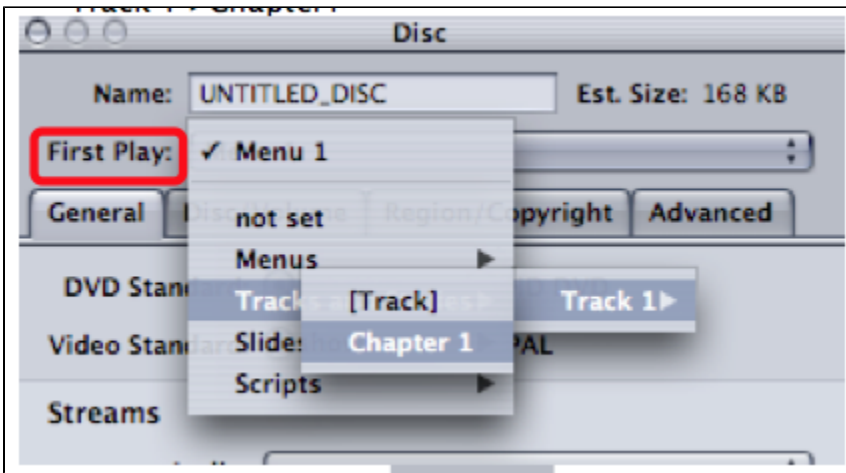

need to make multiple tracks go to  at the top of the DVD Studio window

- Click on the Outline tab (1) next to the Assets tab then click on the UNTITLED_DISC (2)

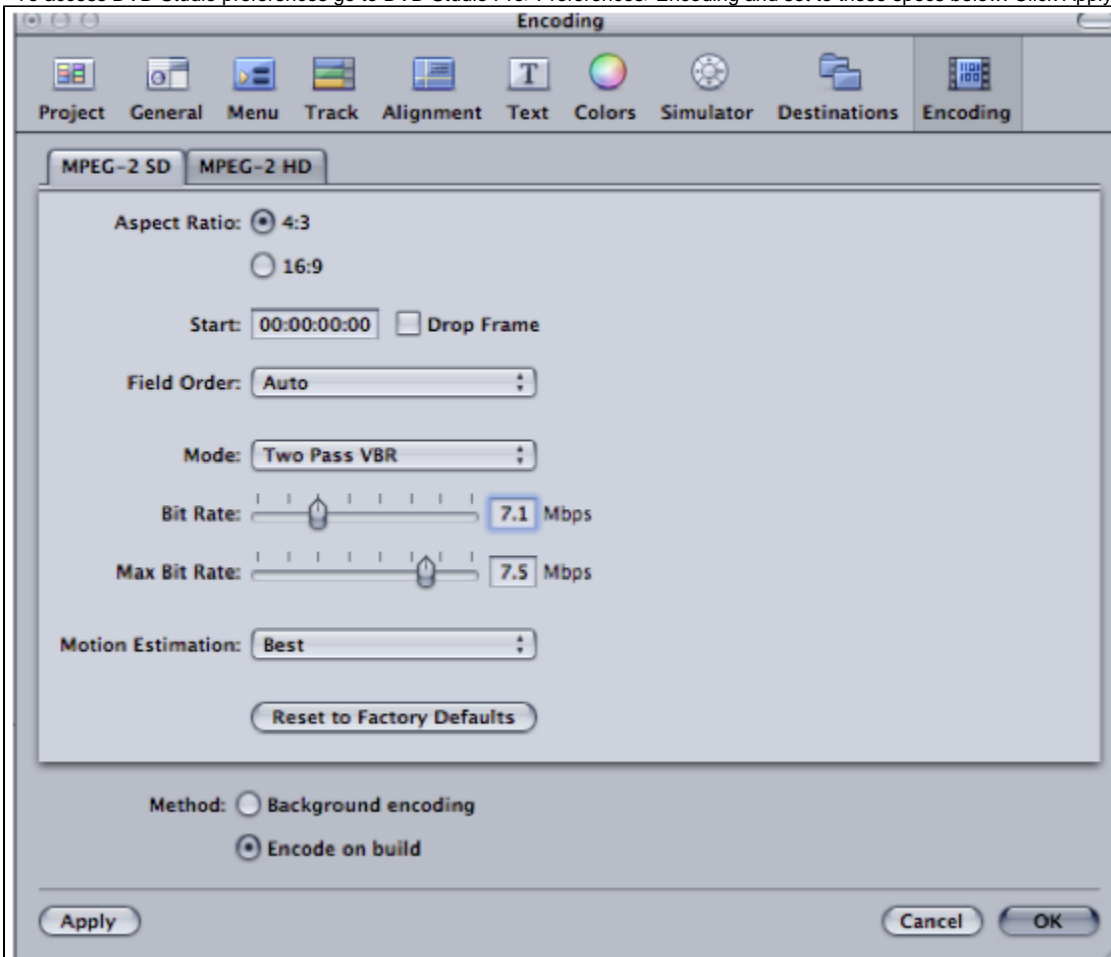

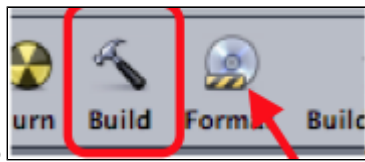

- Then click on the Disc Properties Menu then click on First Play>Menu 1 > Track 1 >Chapter1

Launch the Simulator to check the DVD before burning.

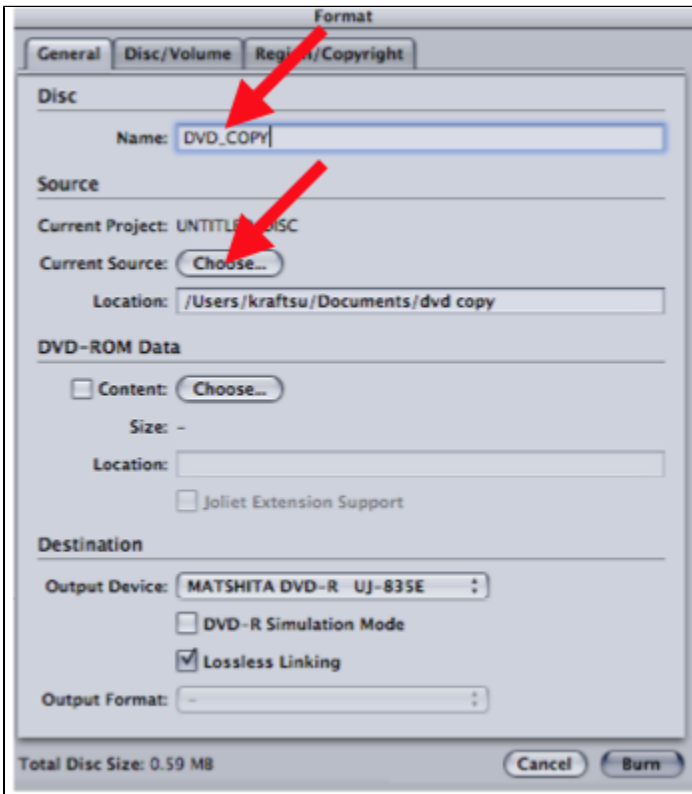

- Set the DVD encoding preferences
- INDVDSTUDIOUSE2PASSVBRANDSETITTO7.1OR7.5
- To access DVD Studio preferences go to DVD Studio Pro>Preferences>Encoding and set to these specs below. Click Apply to apply settings.

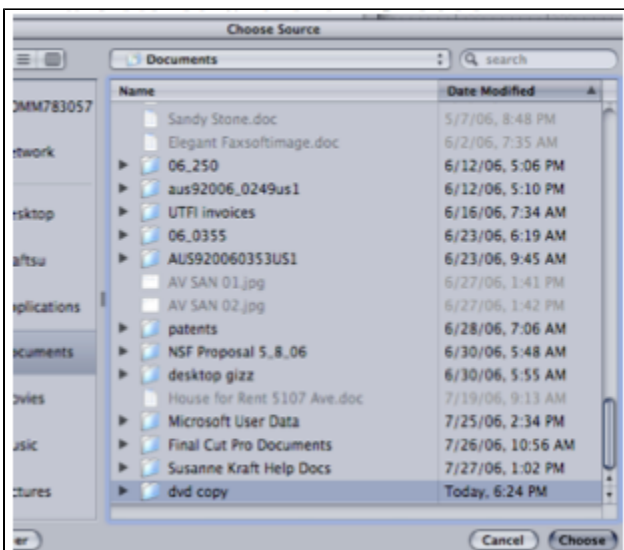

Now build the DVD. Go to **Build** and choose where to save your DVD Video and Audio TS folders. Don't save to the Macintosh Hard Drive or Desktop. Save to local storage drives.

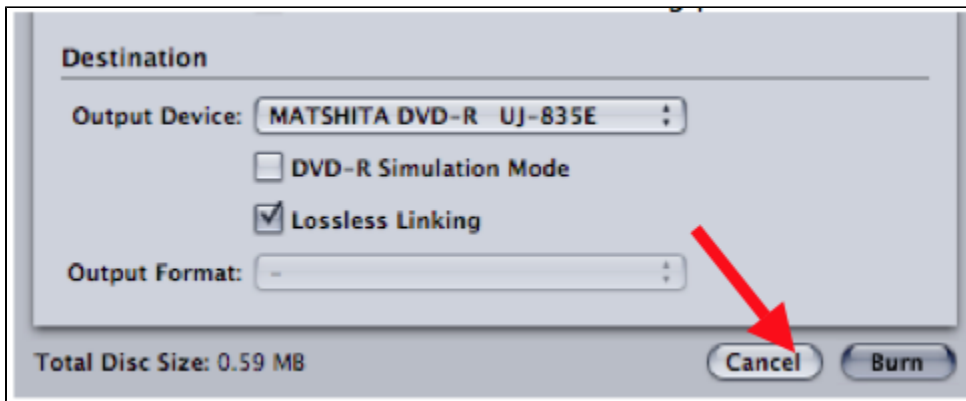

- Once the DVD is built choose **Format** to burn the DVD • Name the DVD Disc
- Click "Choose" to chose the "Current Source" for the DVD

- Navigate to the location that the DVD VIDEO_TS AND AUDIO_TS folders are stored and click "Choose"

- Then click "Burn" to start the DVD burning process

- Put a blank DVD into the burner to burn the DVD material
