

AVID - Motion Effect Change a clips playback frame rate

This is how to change a clips playback frame rate from 25 frames per second to 23.976 (projects frame rate) – This assumes that you have a 23.976 project.

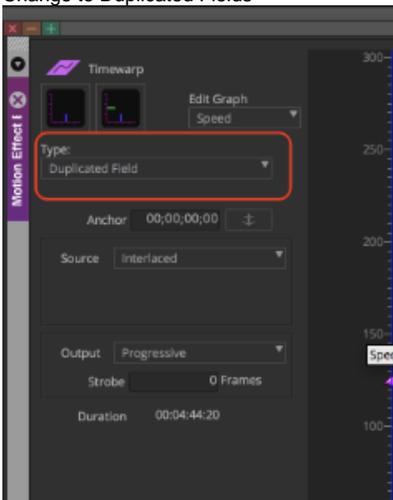

Go to the Animation clip and look at the motion
Go to Tools>Motion Effect Editor

click on Promote

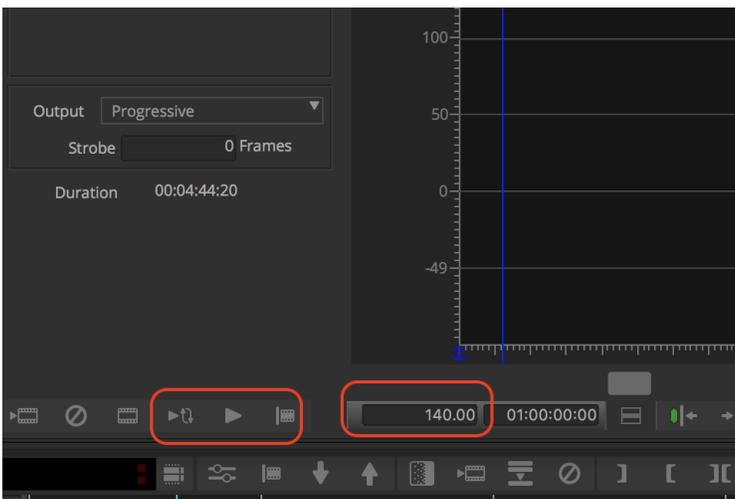

Change to Duplicated Fields

Then you can change the fps here in this window

To make faster put in an amount higher than 100 percent ex: 140 percent will make the footage faster

Hit the play button to see the effect on the footage

Or to make slower put in an amount lower than 100 percent ex: 50 percent will make the footage slower

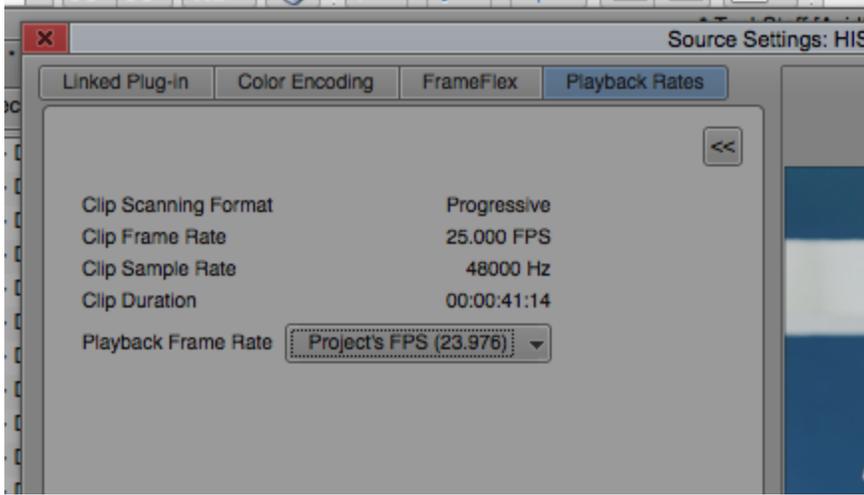

Next if you just want to change the frame rate to make 60 FPS footage 23.976 to slow it down.

If you have footage at the wrong frame rate like 25 fps

A screenshot of the Avid MediaTools Project Browser window. The window title is '* TechStaff [AvidISIS]'. It contains a table with columns for Name, Project, Format, and Video. The table lists several clips, including 'AFF Slideshow_RF03' and 'New Sequence'. A context menu is open over a clip with the format '1080p/25'. A red callout bubble points to the '25 fps change this' text. Another red callout bubble points to the 'Source Settings...' option in the context menu. The bottom of the window shows the 'Time' tab and various tool icons.
