Backdrops

Option 1	Option 2
White or Black Backdrop	Greenscreen Backdrop
The addition of a white or black background can help you hide distracting kids, dogs, and parts of your home office from view.	Using a greenscreen backdrop provides a cleaner/sharper cutout around your head when using a virtual background in Zoom. However the greenscreen is not required if you want to look like you're teaching from the beach. If you're doing more advanced teaching workflows Zoom, your tech support contact may tell you to purchase a greenscreen.

Lights

Option 1 Dimmable Ringlight on a Floor Stand	Option 2 Small Dimmable light on a desk clamp arm	Option 3 10-Inch Tabletop Ringlight	Option 4 6-inch Tabletop 2-Light Kit	Option 5 Dimmable LT
This large ringlight provides smooth shadow-less light when mounted near your camera.	This small light which clamps to your desk will not be as shadow-less as the larger ringlight but is great for tight spaces such as when your computer desk is against a wall. It includes a 2nd arm which can be used to mount an external webcam or cell phone if desired.	This tabletop ring light can extend from 4-15 inches. It is dimmable with three color changing options.	This is a smaller ring light but comes with 2 lights with non-extendable stands. Stands 14-inches tall.	This soft LED p...

<p>It looks dorky, but a headset works better than all the other options and is not expensive. Since you're wearing headphones, there's no echo or feedback and you can hear everyone in your call well. Since the microphone is only a few inches from your mouth, your voice will always be intelligible. It has a simple USB cable so you don't have to fight with Bluetooth wireless settings on your computer and there's no batteries to charge /change.</p>	<p>This microphone will provide better intelligibility than your laptop microphone and is directional which can help cut background noise if you have a noisy recording environment. Using a boom stand, you can fly the mic above your head so no microphone is visible in your camera shot. Th ough expensive, this is the best looking, best sounding solution. It has a simple USB cable so you don't have to fight with Bluetooth wireless settings on your computer and there's no batteries to charge/change. Be sure to get the earbuds listed below to go with the mic to eliminate echo & feedback.</p>	<p>This microphone will provide better audio than your laptop microphone since it is farther away from the noisy fans in the laptop. The mic is low/short enough that it can hide below your camera shot. It has a simple USB cable so you don't have to fight with Bluetooth wireless settings on your computer and there's no batteries to charge /change. Be sure to get the earbuds listed below to go with the mic to eliminate echo & feedback.</p>	<p>This microphone will provide good audio assuming you clip it relatively high on your shirt. Options 1, 2, and 3 will provide better sound quality though. Since the device has a simple USB cable, you don't have to fight with Bluetooth wireless settings on your computer and you don't have to remember the charge /change batteries. Be sure to get the earbuds listed below to go with the mic to eliminate echo & feedback.</p>	<p>If you must have a wireless mic to allow you to walk around, this solution will work and is inexpensive. However, it is not recommended due to the extra complication and points of failure (batteries, wireless interference, etc). Additionally, there is more chance of echo and feedback when using the speakers in your computer rather than headphones or earbuds.</p>	<p>Not recommended due to the extra complexity of configuring Bluetooth earbuds & microphones compared to wired USB microphones. It is especially frustrating when trying to start a call on your computer with these but they have bonded instead to your phone. Be sure to remember to keep them charged!</p>
