

Live Streaming in Studio 6A

This will take you through the steps to set the Blackmagic Web Presenter up to stream to a pre-made event page on YouTube.

First you will need to log in to your YouTube account.

Once logged in, click on your **avatar icon** in the top right corner of the page, and then click on **YouTube Studio**.

Next, click on **Content** on the navigation menu on the left side of the page.

Under the section **DEFAULT STREAM KEY** click the **COPY** button to copy the stream key to the clipboard.

Now you need to launch the Blackmagic Web Presenter's setup tool

Click on the icon under the Blackmagic Web Presenter HD.

Then paste the Stream Key in the box labeled - Key:

Platform:
YouTube

Server:
Primary

Key: Copied from
YouTube

Then click
SAVE.

You can start sending the stream data to YouTube at any time before the start of the event. You can do this by clicking the physical ON AIR button on the front of the BM Web Presenter or by click the ON AIR button in the set up software.

You will see the Web Presenter change from **OFF** to **On AIR**. It is now sending the stream data to YouTube.

Once you have started sending the data to YouTube, you will see the connection status (usually Excellent connection), and the image will appear in the PREVIEW window.

When you are ready to Go Live with the stream, click the GO LIVE button in the upper right hand corner. This will start the stream on your YouTube channel.

Keep in mind there can be about a 20-30 second delay in the stream.

When you are ready to end the stream, click the END STREAM button on YouTube and press the OFF button on the Blackmagic Web Presenter.
