

How to watch Captions on a Digital Cinema Package in Studio 4C

First make sure your DCP has captions

The file will have a CC next to it

First Turn on the Phone Type Device that displays captions

This is located in the A/V closet in 4C.

There are actually 3 buttons but we should only need to

turn on using this one?

The phone device will turn on as shown here

At this window choose Connect

Connecting process will take a second

The device will show >Connected and then choose

>Closed Caption

The captions will be unavailable till
Play is selected on the DCP timeline

Then captions will show on the device

The device mounts on a stand also stored in 4C A/V closet

For reference make sure the captioning server is on and green??
