

AVID - Stereoscopic - How to AutoSync (Sync) 3D clips

File ingested media must be named appropriately with **left eye and right eye** and **S3D Channel** and **S3D group Name** information and **S3D Inversion** prior to transcoding

In Master Clip Bin set up a bin setting that has all the S3D settings turned on
Text View

Bin>Choose Columns	
Choose All/None so that "None" settings are selected	
Next choose all the S3D settings available. Optional - You may also choose other columns that you want to add.	
Save as a bin setting to save time to use throughout your project Click on the bin settings and select "Save As"	
Save Bin setting as 3D Bin Settings or whatever you choose Click OK	

Now you can select the 3D settings on any bin

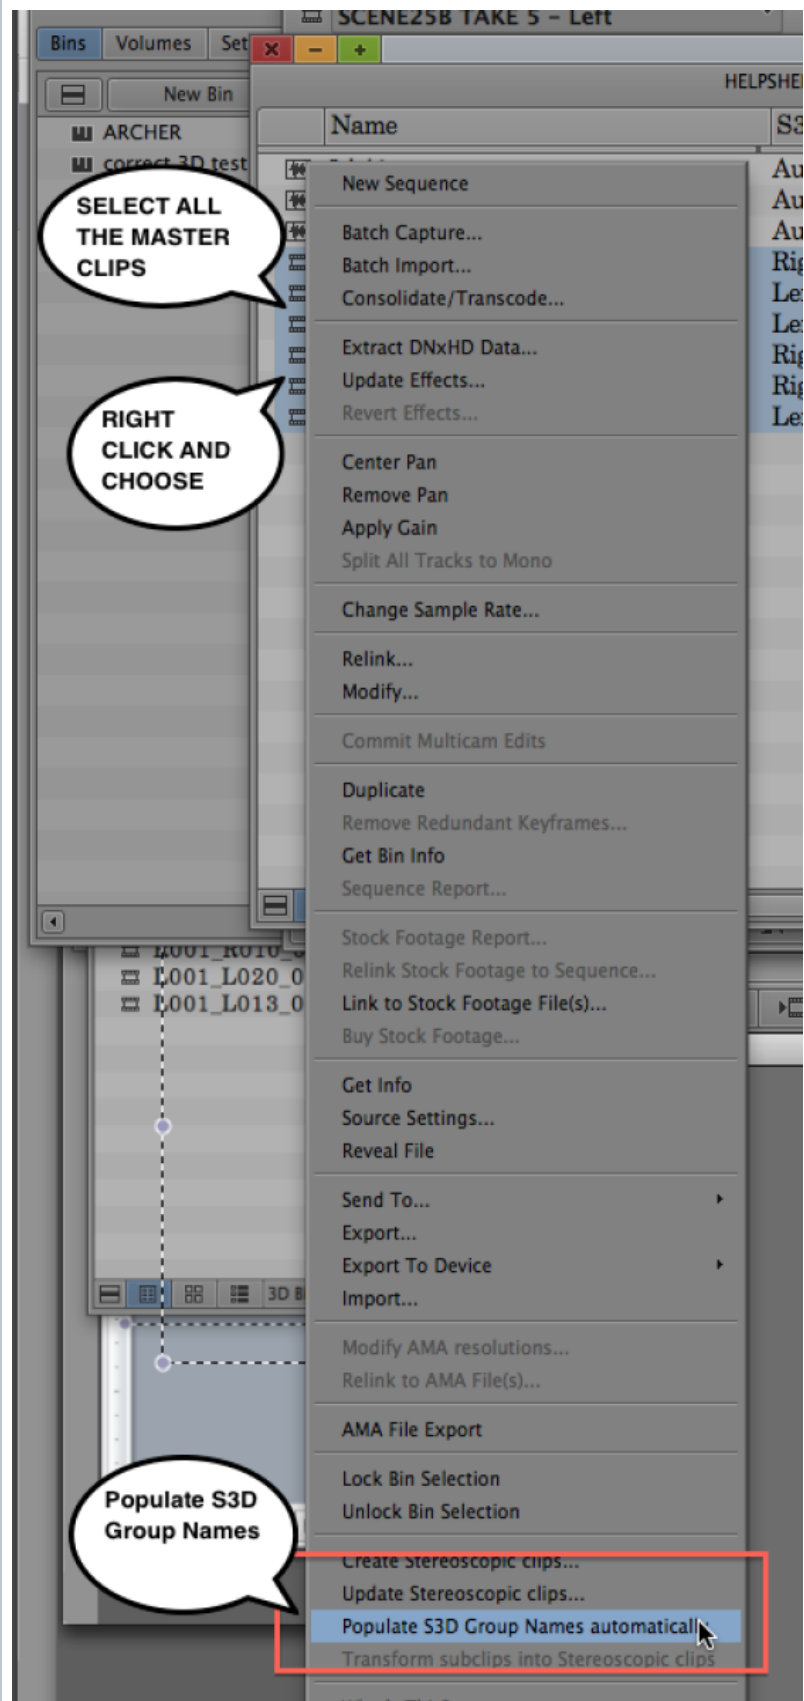

Next set the "S3D channel " to left eye or right eye depending on the clip

at	S3D Channel	S3D
	Left Eye	None
	Right Eye	None
	Right Eye	None
	Left Eye	None
	Right Eye	None
	Left Eye	None
	Right Eye	None

Make sure the root name of the clips is the same. Followed by -L or -R or Left or Right

Name
8A/1
8A/3
25B/5
SCENE 8A TAKE 1 - Right
SCENE 8A TAKE 1_ - Left
SCENE 8A TAKE 3 - Left
SCENE 8A TAKE 3 - Right
SCENE 25B TAKE 5 - Right
SCENE25B TAKE 5 - Left

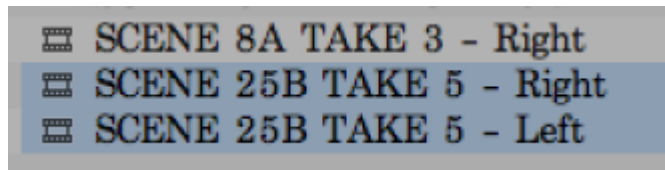

Select all the clips in the Master Clips bin and choose to Populate S3D Group Name automatically – this only works if you have left, right after the same clip root name.

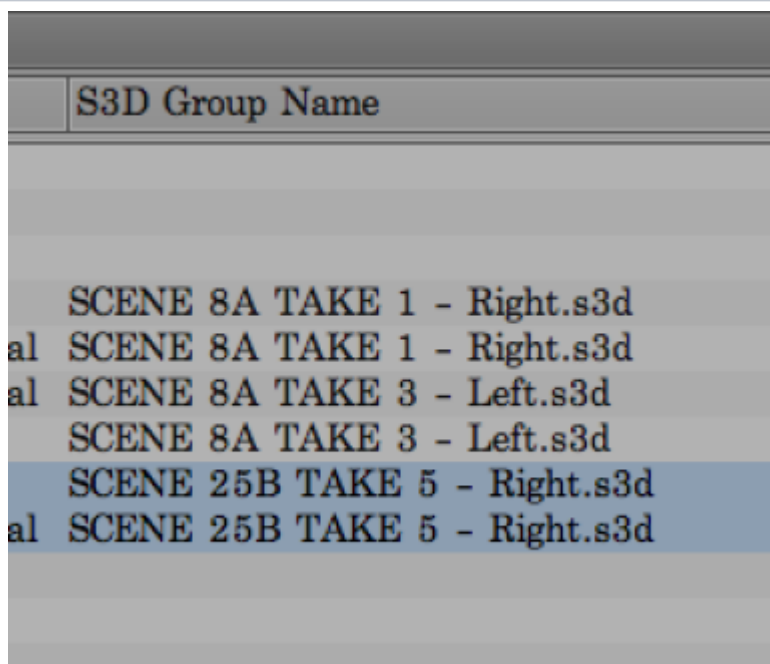

If you get this error then you names are not correct on the master clips. Double check the root names match

And then you might have to do this step matching pairs at a time. Ex: only do Scene 25B Take 5 Left and Right – Then S3d names should populate.

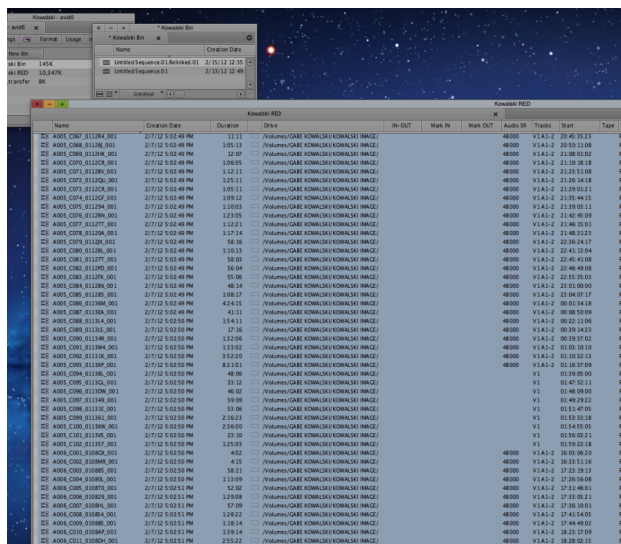

Make sure the .S3D Group names are all populated

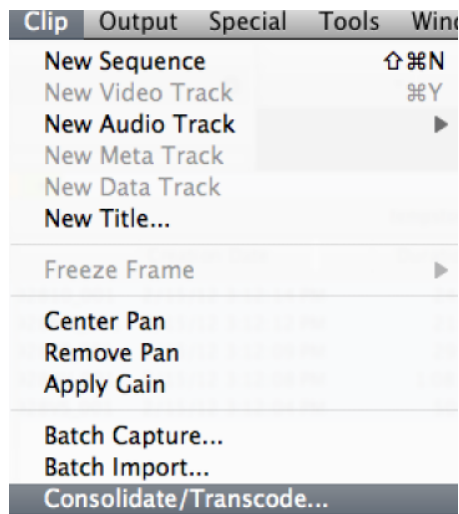

The Next step is to Consolidate and or Transcode your AMA footage

Select all your clips in the bin to Consolidate

Go to >Clip
>Consolidate/Transcode

Choose to "Consolidate"

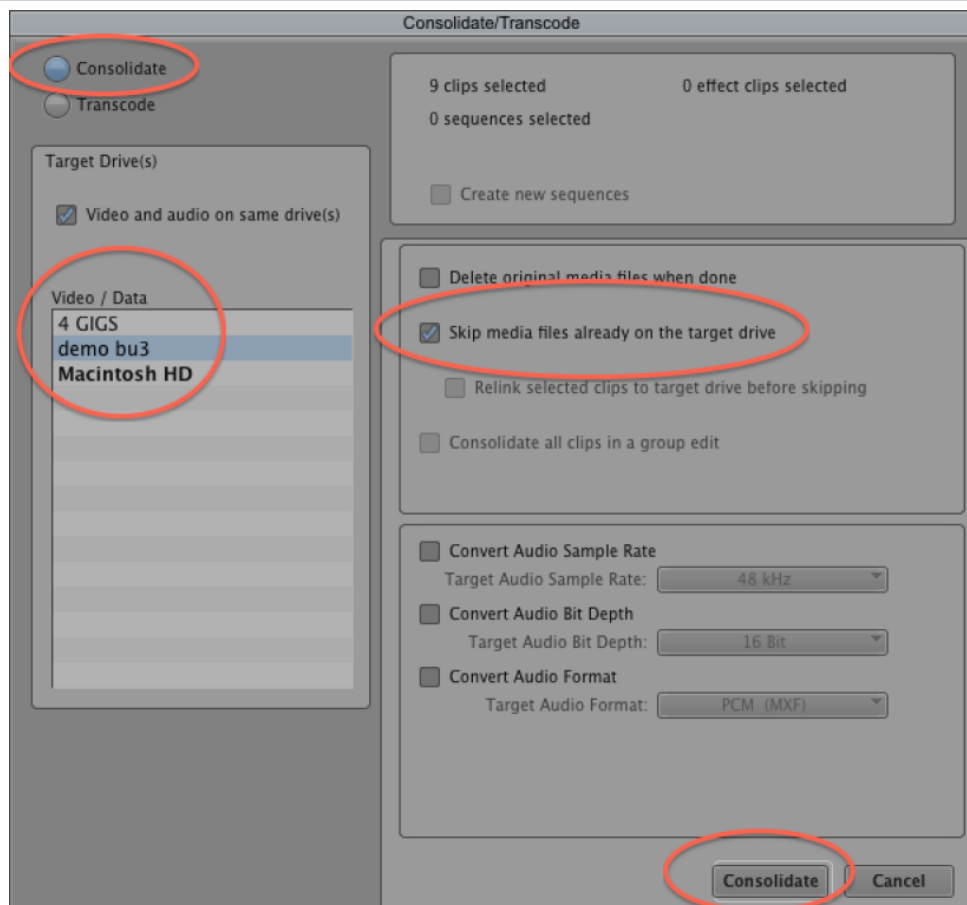

Pick a drive to save the files to
under the
"Video/Data" setting

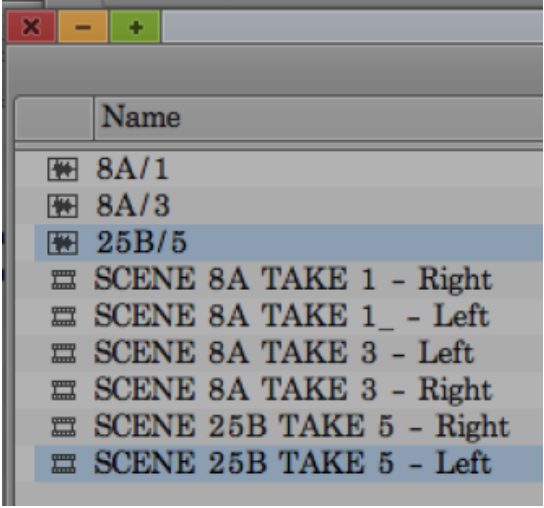

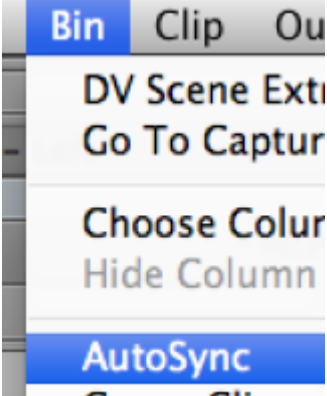

Choose the "Skip media already on
the target drive"

Click "Consolidate" to start
processing of .mxf rewrap

After the process is complete, new
master clips are created in the bin
that point to the "Consolidated"
media.

At this point, you can take your
original media offline by
unmounting the AMA folder
containing the source media.
Select File > Unmount.

<p>Choose to Relink Master Clips to media on the target drive</p> <p>Click OK</p>	
<p>AutoSync your "Leading Eye or Left Eye" ONLY with the double system workflow</p>	<p>Click Here to access the workflow for how to AutoSync</p>
<p>Sync only the Left Eye of all the clips and the corresponding audio</p>	
<p>Both clips need to be in the same bin and select both video and audio clips and choose > Bin > AutoSync</p>	

In our example the timecode matches on both video and audio however ordinarily you will use in points

Sync Selection

AutoSync(tm)

Sync Clips Using:

☐ Film TC/ Sound TC

☒ Inpoints

☐ Outpoints

☐ Source Timecode

☐ Auxiliary TC1

☒ Keep audio on clip with video

Range Start

A1

 End

A16

Include audio from audio-only clips

Range Start

A1

 End

A16

☐ Collapse Audio Tracks

OK

Cancel

Sync Selection

AutoSync(tm)

Sync Clips Using:

☐ Film TC/ Sound TC

☐ Inpoints

☐ Outpoints

☒ Source Timecode

☐ Auxiliary TC1

☐ Keep audio on clip with video

Range Start

A1

 End

A16

Include audio from audio-only clips

Range Start

A1

 End

A16

☐ Collapse Audio Tracks

OK

Cancel

Resulting will be a synced clip like this

	Name	S3D Channel	S
	SCENE 25B TAKE 5 - Left.sync.01	Monoscopic	

Change the S3D channel so that we will use the left eye that was just synced with the audio

	Name	S3D Channel	S
	SCENE 25B TAKE 5 - Left.sync.01	Left Eye	

Next change the group name to the same group name of the "Right" eye.

Right click on the S3D group name and copy it

Horizontal/Vertical

Horizontal/Vertical

Vertical

Vertical

Horizontal

SCENE 8A TAKE 1 - Right.s3d

SCENE 8A TAKE 3 - Left.s3d

SCENE 8A TAKE 3 - Left.s3d

SCEN

SCEN

right click on the S3D group name and copy

Undo

Redo

Cut

Copy

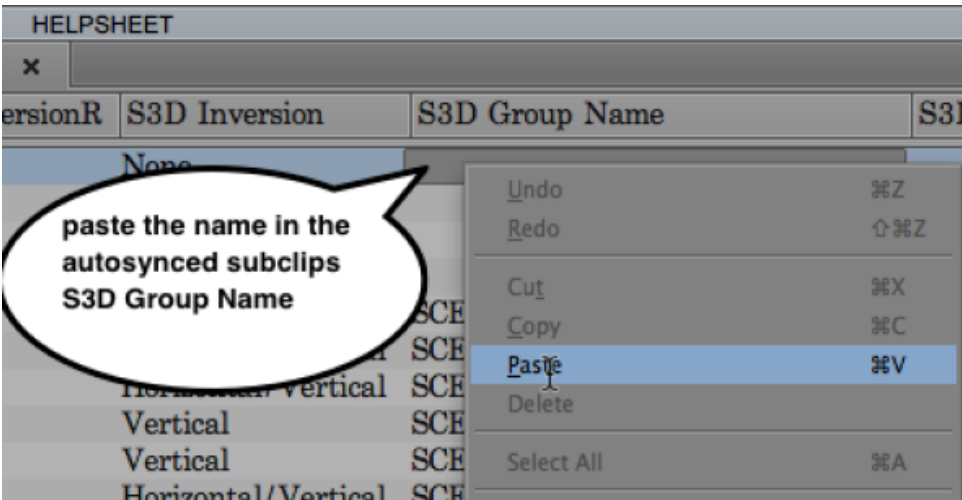

Paste

Delete

Select All

Insert Unicode control character

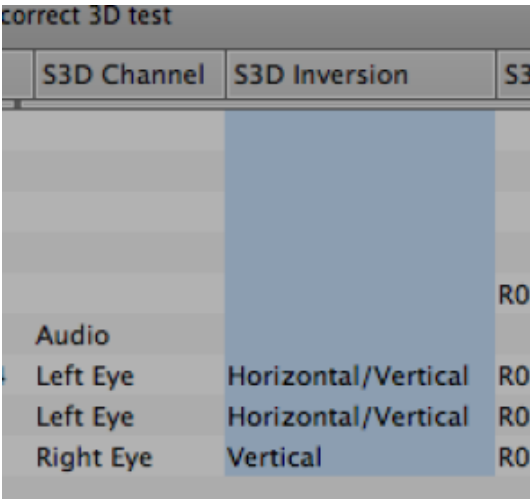

Paste the name in the autosynced subclips S3D group name so both the newly created "Left" eye synced with audio has the same group name as the "Right" eye

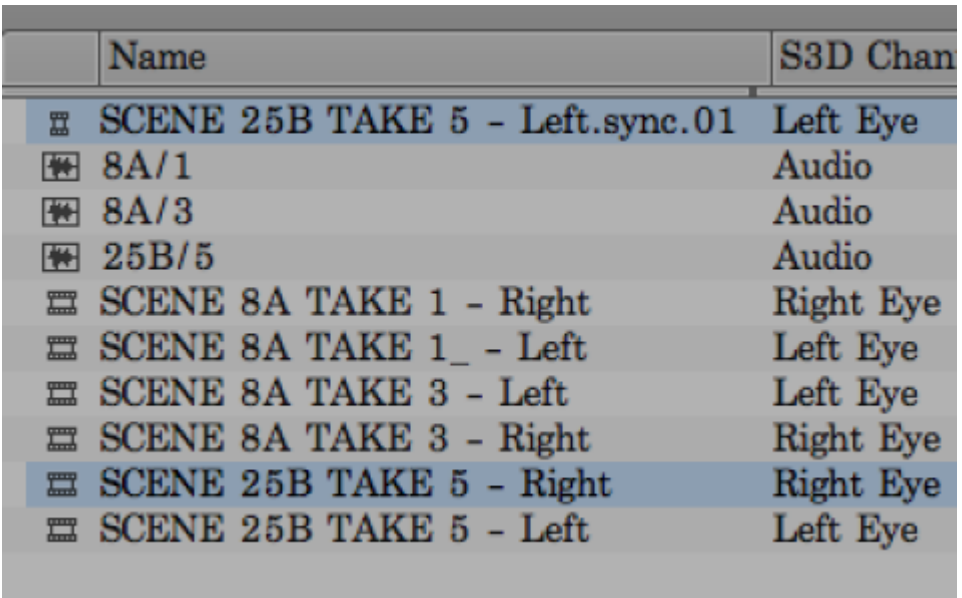

Change the "S3D Inversion" Vertical and Horizontal if you shot with a Stereoscopic Rig

Left change to Horizontal/Vertical

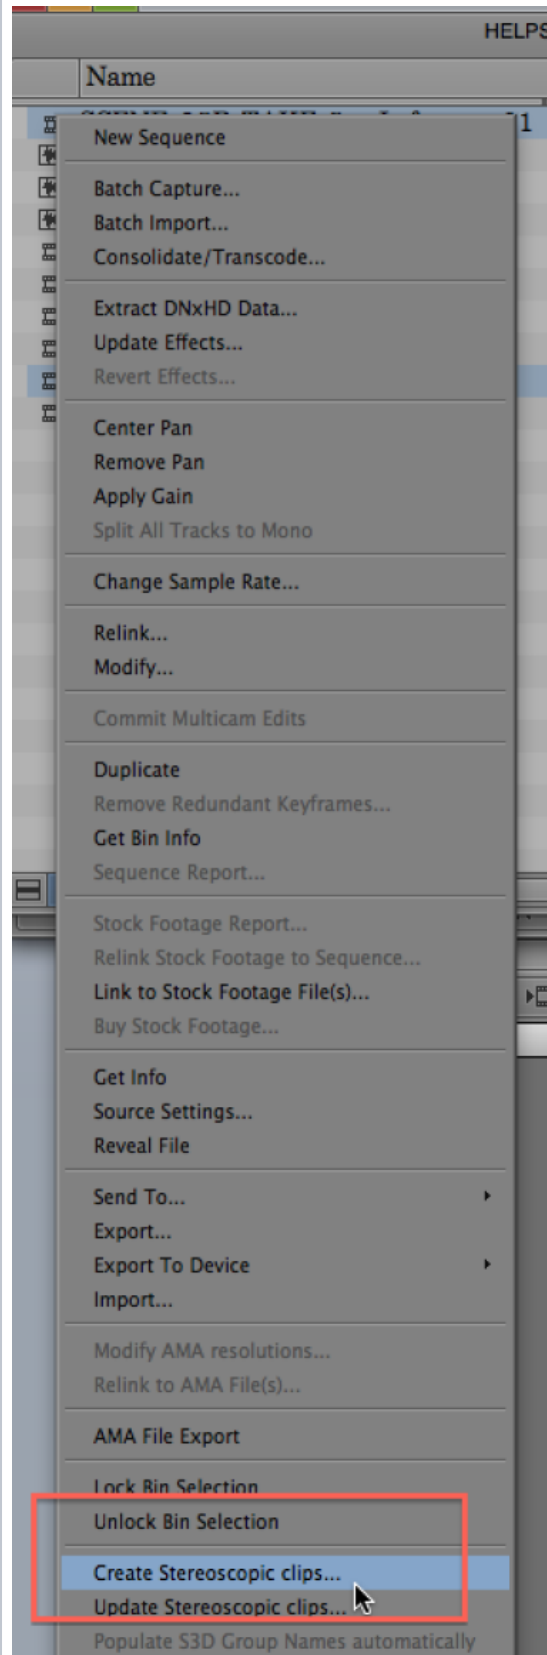

Right change to Vertical

Select the autosynced "Left" eye and the matching "Right" eye

Right click on selected master clips in the bin and choose to "create stereoscopic clips"

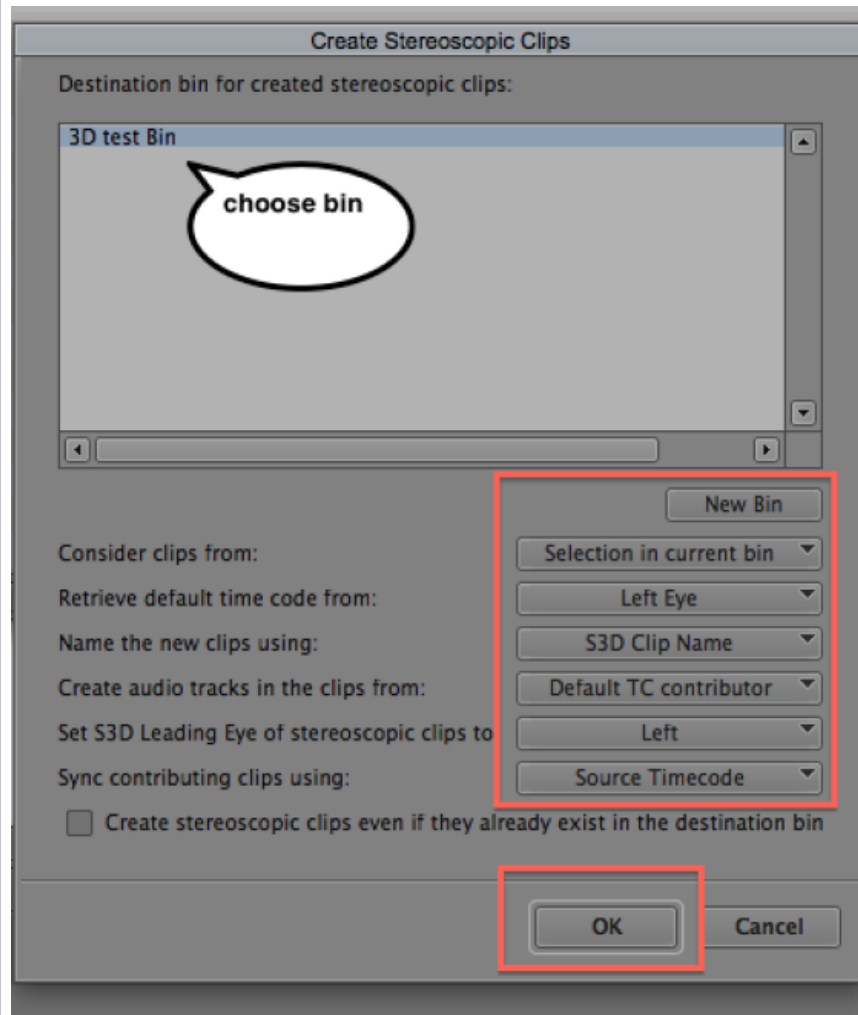

Chose a Bin to save the stereoscopic clips

Match all the settings in this frame grab

Name new clips using S3D Clip Name

Leading Eye is Left and sync clips using Source Timecode

Create audio from default TC Contributor
Click OK

That is it a stereoscopic clip or clips are made continue to use these clips as you would use any master clip in AVID.

	Name	S
	SCENE 8A TAKE 3 - Left.s3d	
	SCENE 8A TAKE 1 - Right.s3d	
	SCENE 25B TAKE 5 - Right.s3d	
	SCENE 25B TAKE 5 - Left.sync.01	L
	8A/1	A
