TACC

This week Benni Goetz from the CCBB will give us some basics on using TACC. To sign up for a TACC account you can go to the user portal here: https://portal.tacc.utexas.edu/

You can download the following scripts to get a feel for what submission scripts look like. These use the launcher module to run several serial jobs in parallel.

SGE submission scripts:

silly_echoes.sge

silly_echoes.txt

Benni has also provided a nice Python script to create launcher-based submission scripts with a simple command:

launcher_creator.py
