

Copy of LiveStream - Setting up to Webcast an event

Use the College's LiveStream account to webcast the event.

College of Communication's LiveStream account - <https://new.livestream.com/ut-comm>

Log in to the account to create an event

Create Your Event

Create your event	 <p>The screenshot shows the LiveStream website interface. At the top, there's a navigation bar with links like Home, U.S. Local News, Global Media Watch, Media, Sports, Technology, Animals & Nature, and Post Events. Below this is a user profile for 'utcomm' (College of Communication) with a 'Like' button and a 'Post' button. The 'Post' button is highlighted with a red box.</p>
Name your event	 <p>The screenshot shows the 'Create Event' form. It has a title 'Create Event' and a subtitle 'Create an event to post text, photos, video and live video.' Below this is a text input field with the placeholder text 'p.g. My Best Friend's Wedding'. This field is highlighted with a red box. At the bottom of the form is a blue 'Continue' button.</p>

Set the date and time of the event

All times are EDT.

When is it?

Let your followers know when to tune in.

Start Time

All times in EDT

09/27/2013 9 55 AM

End Time

All times in EDT

09/27/2013 10 55 AM

Continue

To create the event click the

OK, let's go button

or

Customize your event

When you customize your event

you can create a custom URL,

add a description, add an event

poster to brand your event,

and add Tags.

Event Created!

You can now post text, photos, videos and live videos to your event.

More Customization Options

Start the Stream

Using the computer in the auditorium booth launch LiveStream for Producers

Enter the account username and password

The username and password can be found here on this [Stache entry](#).

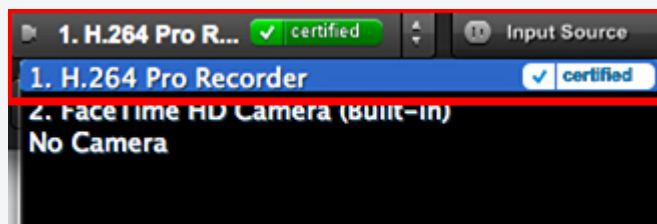

Choose your event

From the drop down menu
choose the newly created event.

Choose the camera

From the drop down menu
choose H.264 Pro Recorder

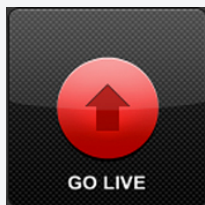

Set the quality level

On most laptops, choose Large, Medium, Mobile.

Note that choosing HD quality will often overtax the system and crash the program.

To begin streaming click the
GO LIVE button

Once the stream begins you will see the HUD where you can view the Timecode, CPU usage, Data Rate, and FPS.

You will also get an indication of how the stream is performing. You want to always see the green "Perfect Streaming"

If the computer can not handle encoding all the necessary streams then the CPU will begin to suffer performance issues

and can cause the stream to crash.

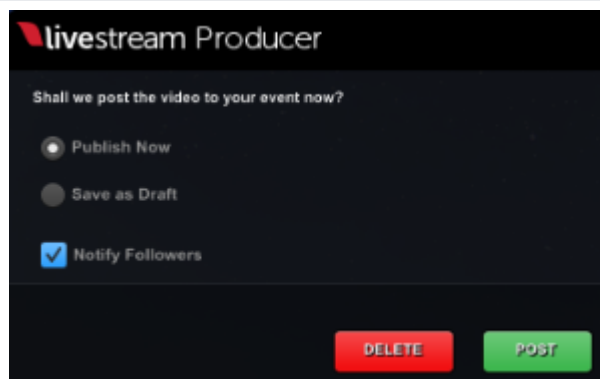

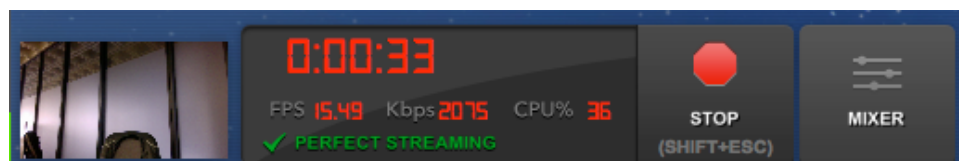

To end the stream click the STOP button on the HUD.

At the end of your event, Choose to delete or keep the recording.

Note that you can keep the recording but not publish it if desired.

This keeps the public from seeing it but allows you to download it later or trim the beginning & end before posting it.

CAUTION: Clicking DELETE will delete the video that was just recorded and it will be gone forever. Do not click DELETE unless you knowingly want to delete the stream that was just recorded.
